Descrição geral PT-BR: Bem-vindo à coleção **Deep Galactic Gateway**! Juntos vamos explorar dos mais diversos locais e vamos nos deparar com os mais bizarros eventos do universo!

General description ENG: Welcome to the **Deep Galactic Gateway** collection! Welcome to the Deep Galactic Gateway collection! Together we will explore the most diverse places and we will come across the most bizarre events in the universe!

Title: # 01 - Welcome

Description: Welcome to the **Deep Galactic Gateway** collection! Step inside the portal and let's explore some of the strangest and most diverse places in the universe together!

Amount: 10

Title: # 02 – The eggship of lost souls

Description: An egg-shaped ship, featuring a sad, distorted face, with something resembling an open mouth, through which it devours unsuspecting souls. Our crew almost got caught by surprise!

Amount: 10

Title: # 03 - Xenos City Ships

Description: Colossal ships land at the docks of the planet 'Xinerdia IV'. These spaceships are capable of maintaining entire biomes of the most diverse planets, serving as true intergalactic zoos.

Amount: 10

Title: # 04 - Planetoid ship parasite

Description: While fleeing from the soul-devouring egg ship, we fell into a series of tunnels that showed us that the planet we were on was parasitized by an interesting organism. It parasitized planets by consuming their mineral and biological resources. Meanwhile, when the infestation is advanced, it produces spores that look like spaceships or even asteroids in space capable of parasitizing other planets or spaceships that contain life forms on board.

Amount: 10

Title: # 05 - Aurora feeder

Description: There are very interesting and different planetary parasites. In this case, the Aurora feeder, although it settles on a planet, feeds on bursts of energetic plasma from the star that the planet orbits. During aurora events (similar to the aurora borealis here on Earth) it feeds and grows, further heating the planet's core and producing extremely rare minerals, highly sought after by space mining companies. At the end of the cycle, the planet explodes into pieces, which will infect other planets where they fall.

Amount: 03

Title: # 06 – Martian bloom

Description: Instead of destroying planets, this entity generates new planets. Iron-rich planets like Mars are mass-produced by this superstructure and sent to new star systems in formation by gravity. The Martian bloom occurs when several planets similar to Mars are thrown into space as if they were dandelions flying in the wind.

Amount: 10

Title: # 07 - # 07 - Jellyfish Ships

Description: Advanced aquatic and amphibious civilizations often use jellyfish-type spacecraft. Here we see jellyfish ships exploring an environment similar to Earth. However, here the wavelength for photosynthesis is closer to ultraviolet.

Amount: 10
